The Science of Security (SoS) Initiative at the NSA Research Directorate promotes foundational cybersecurity science that is needed to mature the cybersecurity discipline and to underpin advances in cyber defense. Beginning in 2012, one part of the initiative was to fund foundational research at lablets. With emphasis on building a community, each lablet created partnerships, or sub-lablets, with other universities. SoS researchers often freely collaborate with researchers in other institutions worldwide. In 2014, the SURE project was founded to investigate cybersecurity in the cyber-physical systems realm. This map illustrates the expansion of the SoS Initiative community.
